## CURRICULUM DEVELOPMENT, COURSE DESIGN, COURSES TAUGHT

---

- **CSC113 Introduction to Computing MATLAB: 2012-2023 each Fall & Spring, Distance Education Online section 2021-2023 each Spring**

I created the *CSC113* course in Fall 2012, which is a required, computing course for Mechanical and Aerospace engineering students and it is also taken by other engineering undergrads. Enrollment is about 250-350 students per semester with around 15-17 undergraduate TAs, who teach the Lab sections ( 40 students, 2 TAs) and I am the sole main instructor. In 2018, I *redesigned the course* (supported by NC State's redesign grant) by adopting flipped classroom, creating 75 short, captioned videos that explain each topic and have worked out coding examples, autograded self-checked multiple choice questions, autograded small programming questions. My current CS Ed. research is focused on evaluating the effectiveness of my pedagogy in this course: flipped format, broadening participation in computing interventions, help-seeking structures and HyFlex (since 2021).

- **CSC492 Senior Design: 2016-2023 each Fall & Spring**

This core course is the final capstone course for undergraduate Computer Science students. As a Technical Adviser I typically work with 7-10 teams (4-5 students per team) on industry sponsored projects. Project topics include: web-development using modern technologies to visualize and store data, applied machine learning, working with systems and services from the Cloud, IoT devices (microcontrollers, various sensors), game development, Mobile App development (iOS, Android), virtualization (VMs, Docker Containers), REST APIs, etc. A few selected projects that show the variety of projects I have advised in Senior Design:

- 2022 Fall NetApp: 40Gbps Long Distance Network Emulator
- 2022 Spring Merck: Supply Chain Risk-Based Decision Expert System
- 2020 Fall: Database for the research at [NC State's Mobile Gaming Research Lab](#)
- 2019 Fall: [\[FIRST Tech Challenge\]](#) Live Scoring
- 2019 Fall: Bandwidth Network Usage Data Mining (Hadoop, Hive, Kafka, Elasticsearch)
- 2018 Spring NCSU: Website Scheduler for [EcoPRT](#)
- 2018 Spring Cisco: X.509 Certificate Revocation, read the [blog](#).
- 2017 Fall Cisco: Lightweight crypto Validation and Assessment, read more in this [blog](#).
- 2017/2018: Worked with a local nonprofit [NC Collaborative](#) on a web application that would allow the nonprofit to do online training associated with quiz/assessment and user management.
- Fall 2016 Principled Technology: Prototype of a Virtual Reality Game developed in Unity as a Performance Benchmark, [press release](#)

- **CSC401 Introduction to Data Communication Networks: 2015-2022**

I redesigned this upper-level networking elective and was the course coordinator from 2018 to 2022. This course had enrollment of about 60 junior or senior CS undergraduates. I adopted the top-down approach (from application-layer to physical-layer) and added modern topics such as Software Defined Networking, Content Distribution Networks, Internet of Things, etc. The students gained both theoretical and practical networking skills.

- **CSC116 Introduction to Computing JAVA: 2013 to 2017**

This is the CS1 core course for CS majors. The focus of the course is on algorithm development, problem solving and methodical development of Java applications from specifications; documentation and style; appropriate use of control structures; classes and methods; data types and data abstraction; object-oriented programming and design; graphical user interface design.
